In an industrial enterprise many different people work together. They have different jobs to fulfill, and every single person and his or her skills and experiences are necessary to produce and sell the product. This is the lesson Sheila and Dennis learn during their first day in the airplane factory. Besides manufacturing there are sales, marketing, research and development and many more important steps and people involved in putting an airplane together. Only with the tremendous cooperation of the whole team can each airplane be made ready for takeoff!

How is an Airplane made?

Sheila and Dennis learn about processes and professions at a modern aerospace company.
